# Utility of National Aquatic Resource Surveys for Michigan Water Quality Assessment

---

Gary Kohlhepp

September 13, 2023

Michigan Wetlands Conference

# Why NARS?

Over the years, states, federal agencies, and others implemented water quality monitoring using a variety of approaches. While valuable individually, they did not fulfill national monitoring and assessment needs.

Water Quality: Key EPA and State Decisions Limited by Inconsistent and Incomplete Data, U.S. General Accounting Office, 2000

Most monitoring not done in a way that allows for statistically valid assessments of water quality in unmonitored waters.

Information summaries from state 305(b) reports cannot be meaningfully compared and are not appropriate for national and many other uses

## NARS Objectives

1. Assess the biological/recreational condition and changes over time of the nation's waters
2. Rank stressors based on the relative associations between indicators of condition and indicators of stress
3. Build/enhance state and tribal monitoring and assessment capacity

# National Aquatic Resource Survey Schedule

	FY16	FY17	FY18	FY19	FY20	FY21	FY22
Lakes	Design	Field	Lab, data	Report	Research	Design	Field
Rivers	Research	Design	Field	Lab, data	Report	Research	Design
Streams	Report	Research	Design	Field	Lab, data	Report	Research
Coastal	Lab, data	Report	Research	Design	Field	Lab, data	Report
Wetlands	Research	Research	Research	Research	Design	Field	Lab, data

# National Consistency: NARS Approach

---

- Randomized design to report on condition of each resource nationally and regionally
  - 1,000 sites in lower 48
- Standard field and lab protocols
- Core indicators
- National QA and data management
- Nationally consistent and regionally relevant data interpretation and peer-reviewed reports

# Site Selection/Locations

## Example of NARS Design: Perennial Rivers and Streams

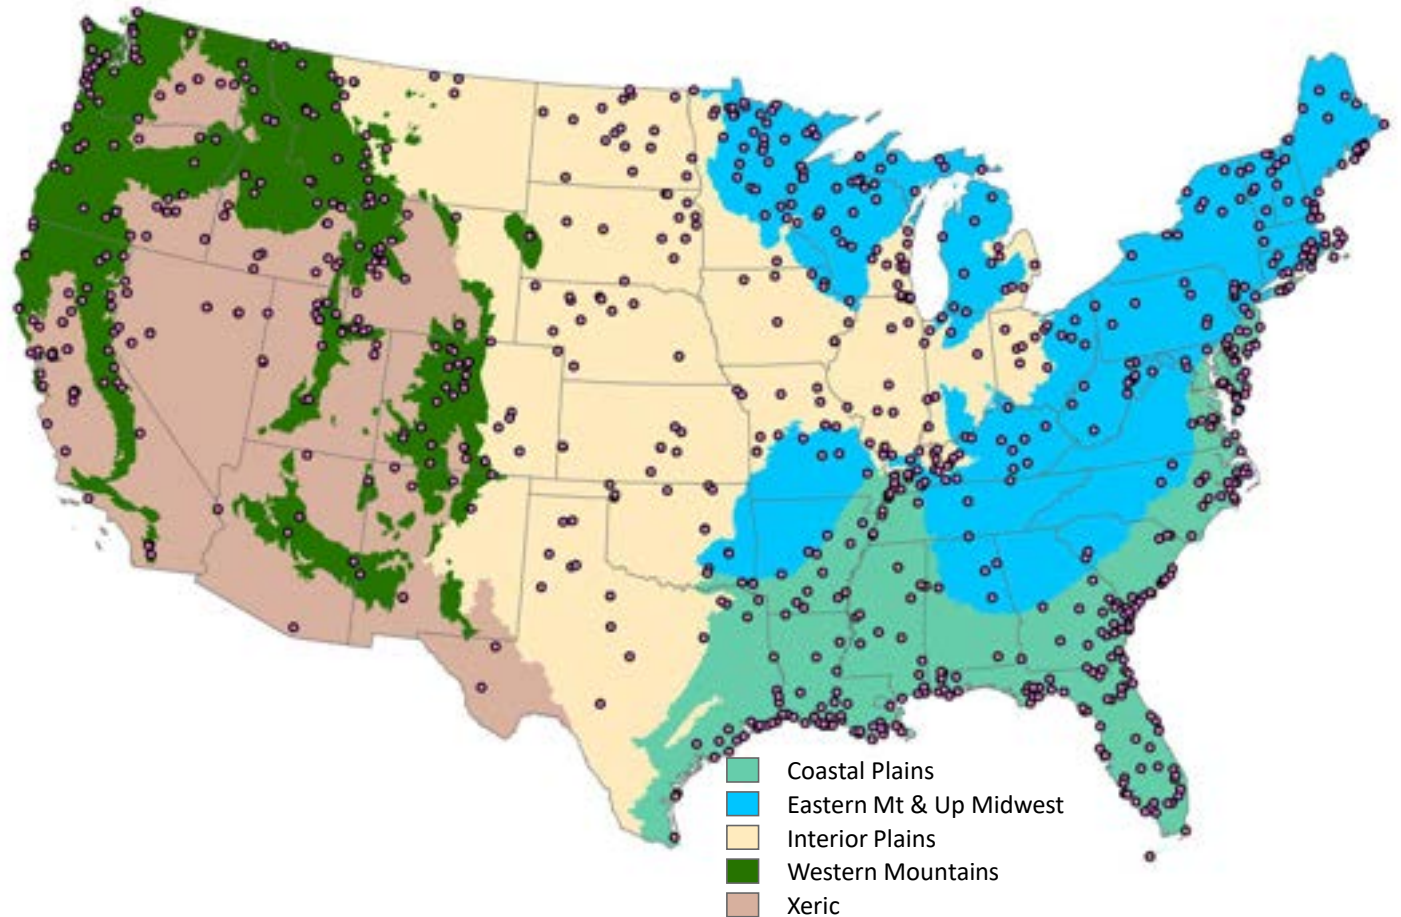

- Representative set of 1,853 sites were sampled
- Data represent 750,000 miles of rivers and streams

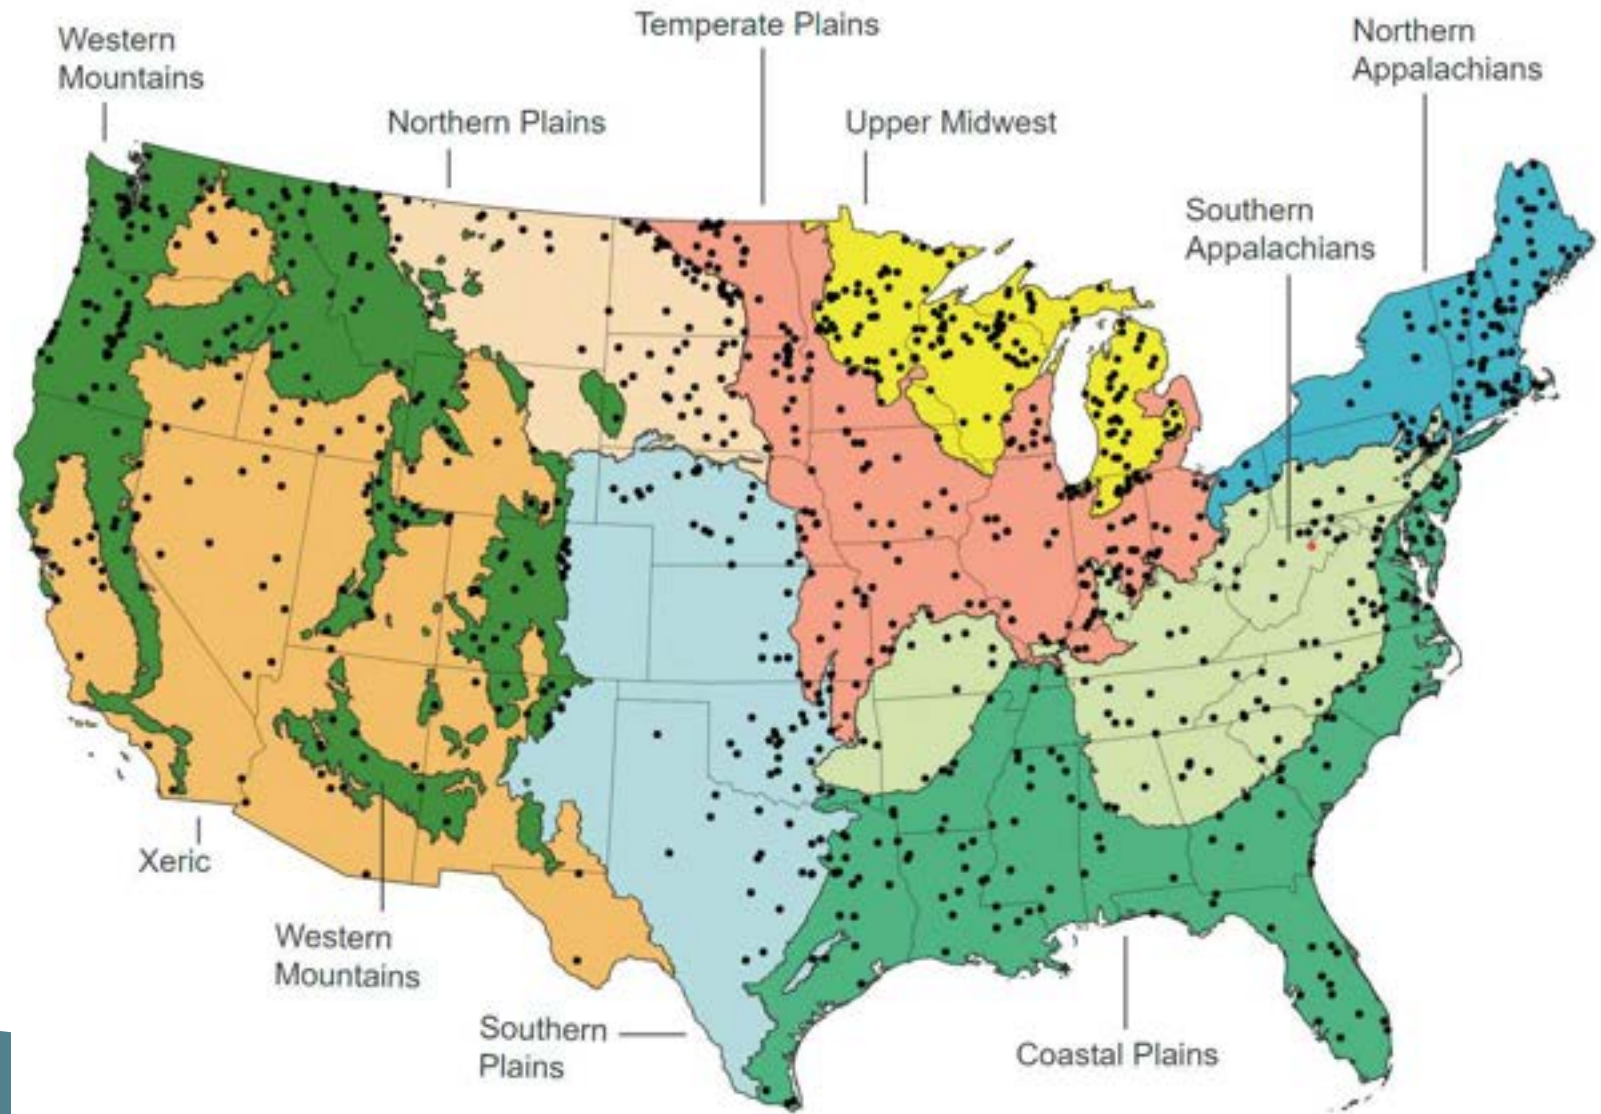

# National Wetland Condition Assessment 2016

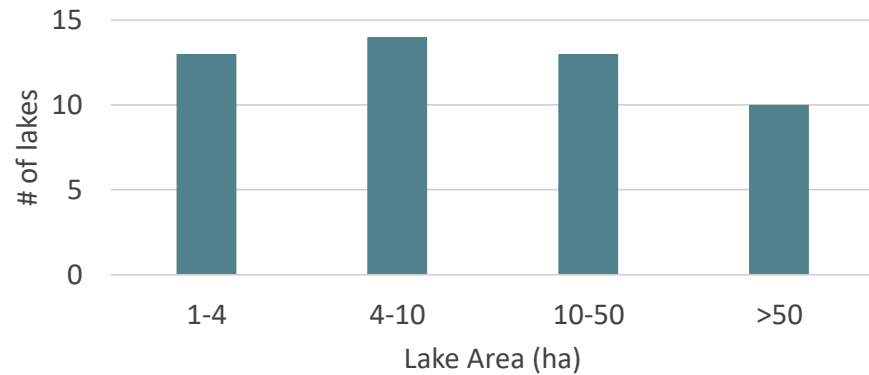

- Representative set of 967 sites sampled
- Data represent 95,694,241 acres of wetlands

# 2017 NLA Sites and Ecoregions

# 2012/2017 Michigan NLA Lakes

Lake	County	Area (ha)
Lake Mitchell	Wexford	1061
Crooked Lake	Emmet	969
Pere Marquette Lake	Mason	242
Palmer Lake	St. Joseph	198
West Lake	Kalamazoo	133
Saddle Lake	Van Buren	110
Au Sable Lake	Ogemaw	107

## Design Sites for the 2010 National Coastal Condition Assessment

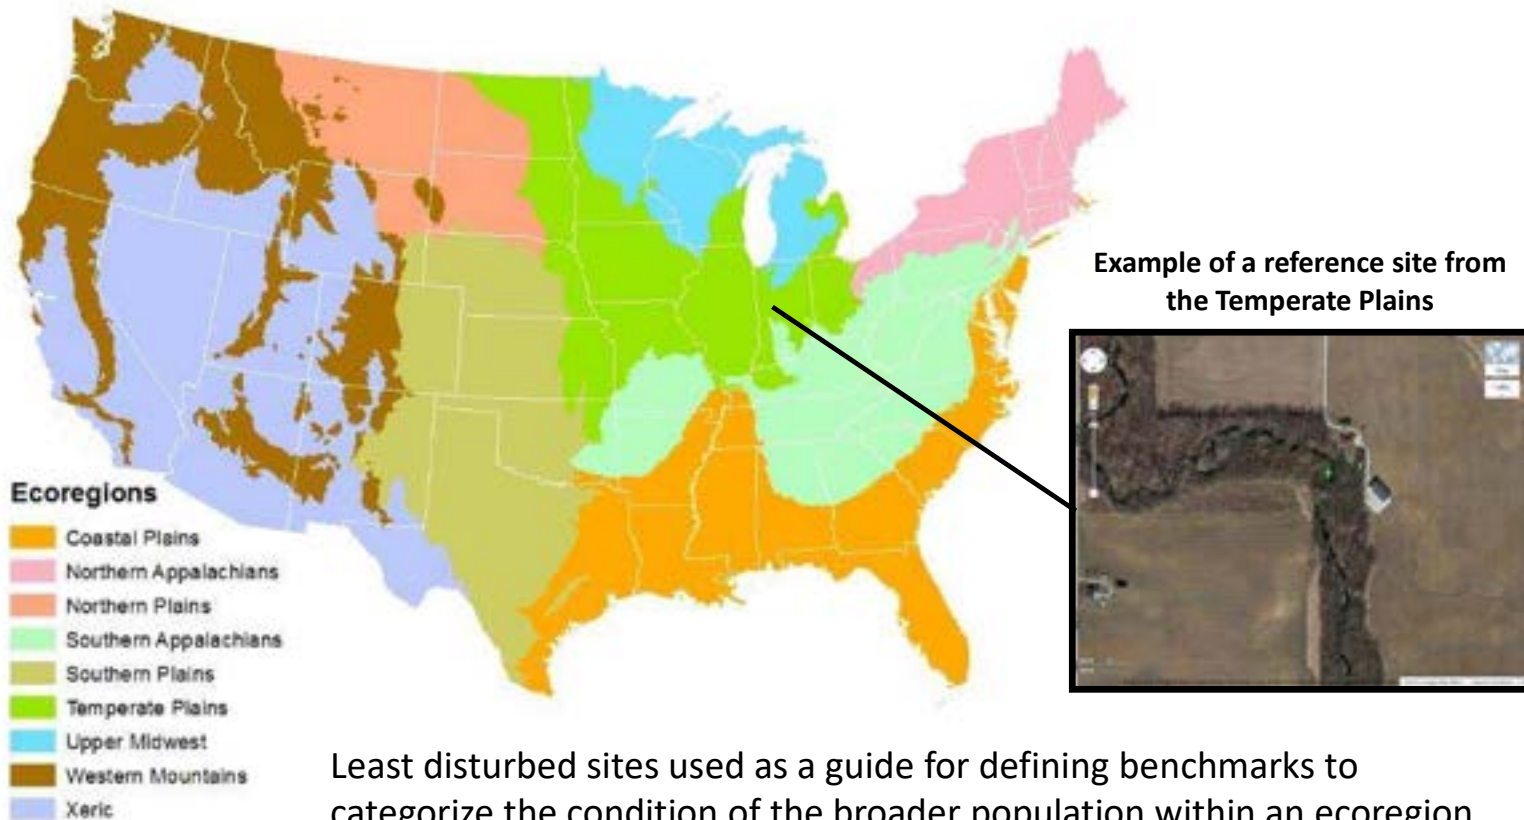

0 215 430 860 1,290 1,720 Kilometers

Geographically relevant benchmarks are used to assign condition classes

Least disturbed sites used as a guide for defining benchmarks to categorize the condition of the broader population within an ecoregion.

# NARS Parameters/Indicators

# Rivers and Streams Indicators

## Biological

- Benthic Macroinvertebrates
- Fish Assemblage

## Chemical

- pH, DO, Temperature, Conductivity
- Water Chemistry
- Chlorophyll *a*

## Physical Habitat

- In-stream Fish Habitat
- Riparian Vegetation
- Riparian Disturbance
- Streambed Sedimentation

## Human Use (Recreation)

- Algal toxins
- Enterococci
- Fish Tissue Mercury: Plugs & Fillets

## Research Indicators

- Periphyton

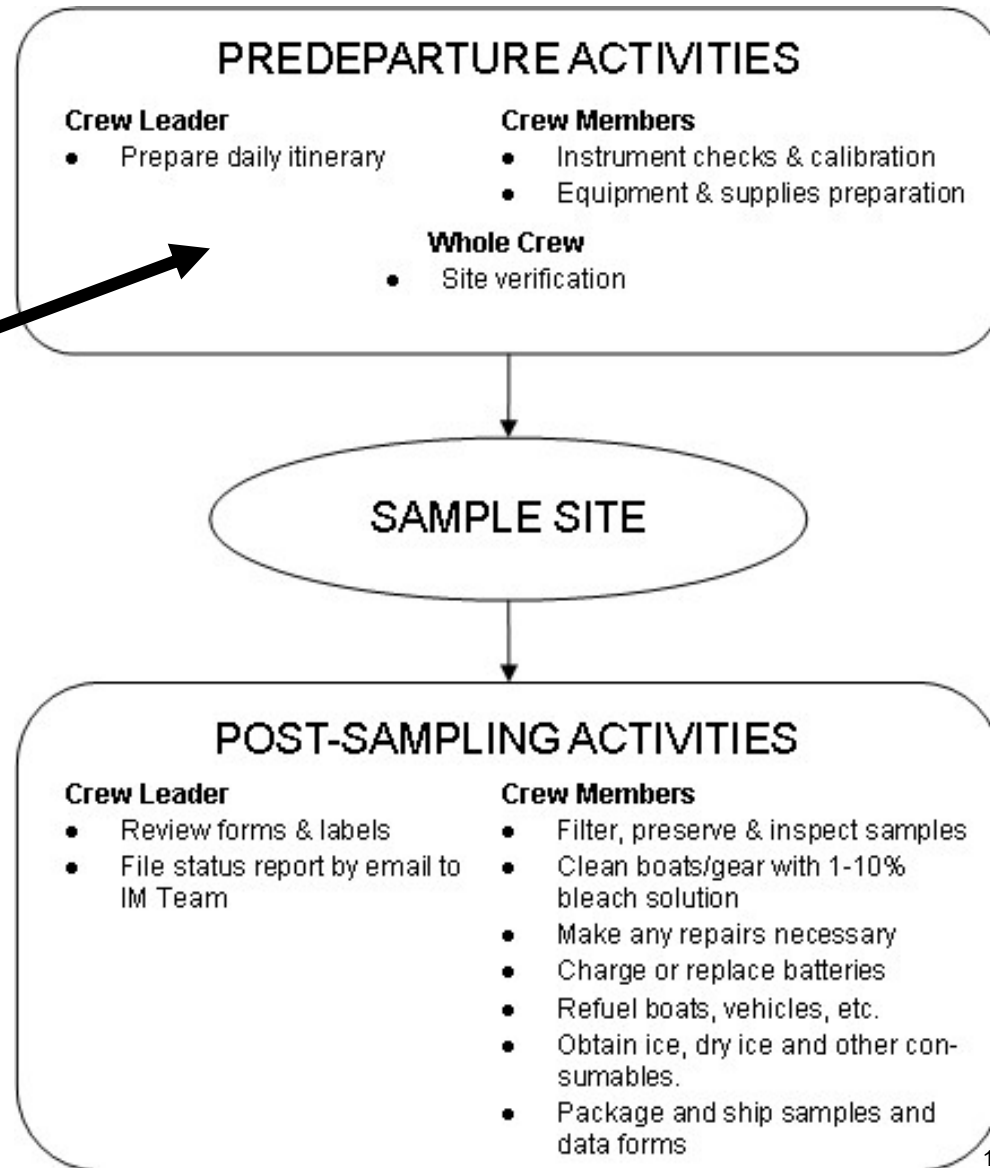

# Lakes Indicators

Chemical	Trophic State	Biological	Physical	Recreational
<ul style="list-style-type: none"> <li>•Dissolved oxygen</li> <li>•Nitrogen</li> <li>•Phosphorus</li> <li>•Atrazine</li> </ul>	<ul style="list-style-type: none"> <li>•Trophic State</li> </ul>	<ul style="list-style-type: none"> <li>•Benthic macroinvertebrates</li> <li>•Chlorophyll a</li> <li>•Zooplankton</li> </ul>	<ul style="list-style-type: none"> <li>•Drawdown</li> <li>•Human disturbance</li> <li>•Lakeshore habitat</li> <li>•Physical habitat complexity</li> <li>•Shallow water habitat</li> </ul>	<ul style="list-style-type: none"> <li>•Algal toxins</li> <li>•Cyanobacteria</li> <li>•Enterococci</li> </ul>

webinar!

# Example Data Uses

## How widespread are key stressors?

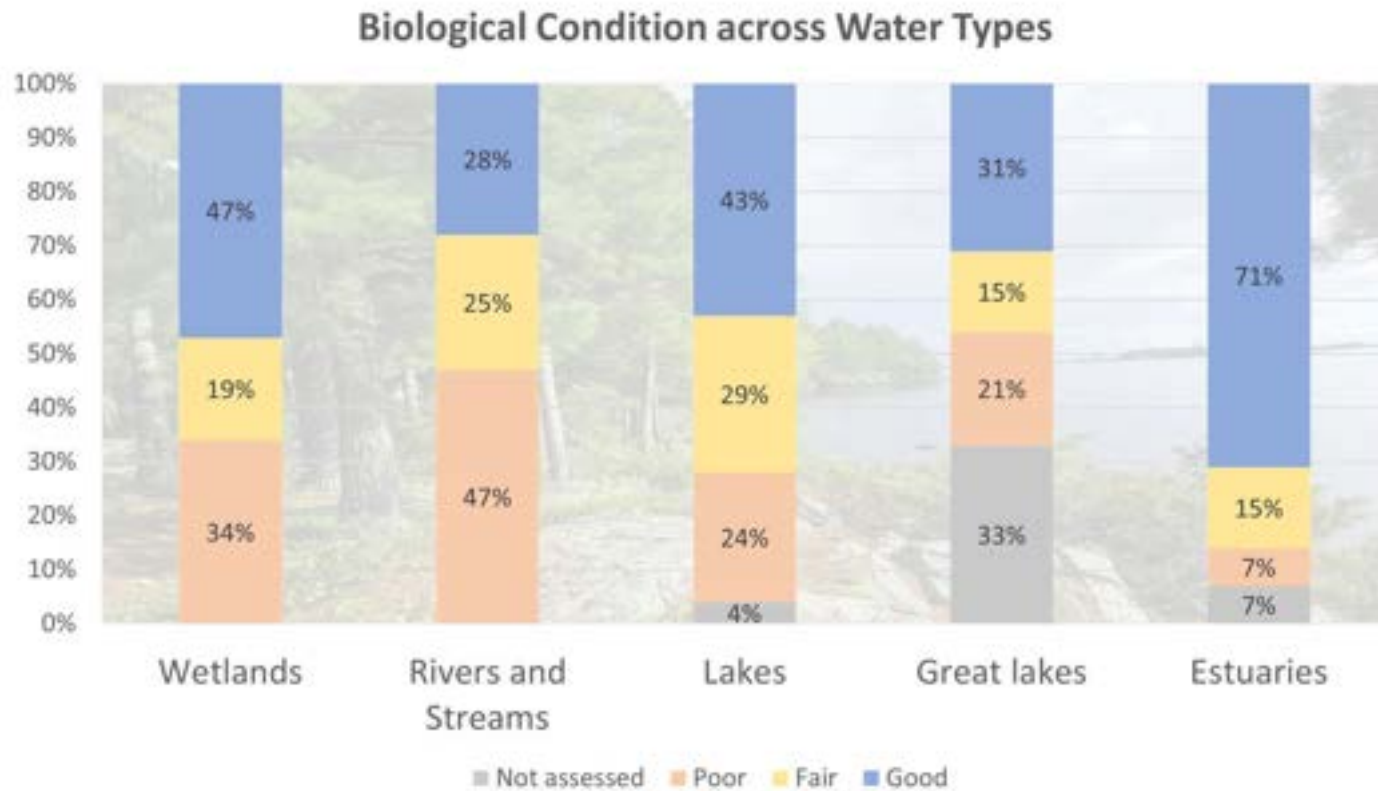

Nutrients and degraded habitat are problems across the country

- Excessive levels of phosphorus are reported in 42% of rivers and streams, 45% of lakes and approximately 20% of coastal waters.
- Habitat degradation is widespread. Approximately a third of wetland area, lakes and river and stream miles are in poor condition.

# What is the biological condition of our waters?

Coastal waters, rivers and streams and lakes based on benthic macroinvertebrates; wetlands based on vegetation.

# 2017 Condition - Trophic State

### MI Estimates

Indicator: TROPHC\_STATE

### National Estimates

Indicator: TROPHC\_STATE

Oligotrophic	≤2	ug/L
Mesotrophic	>2 and ≤7	ug/L
Eutrophic	>7 and ≤30	ug/L
Hypereutrophic	>30	ug/L

## 2017 Michigan NLA Lake Condition and Stressors

**2012 NLA**

**2007 NLA**

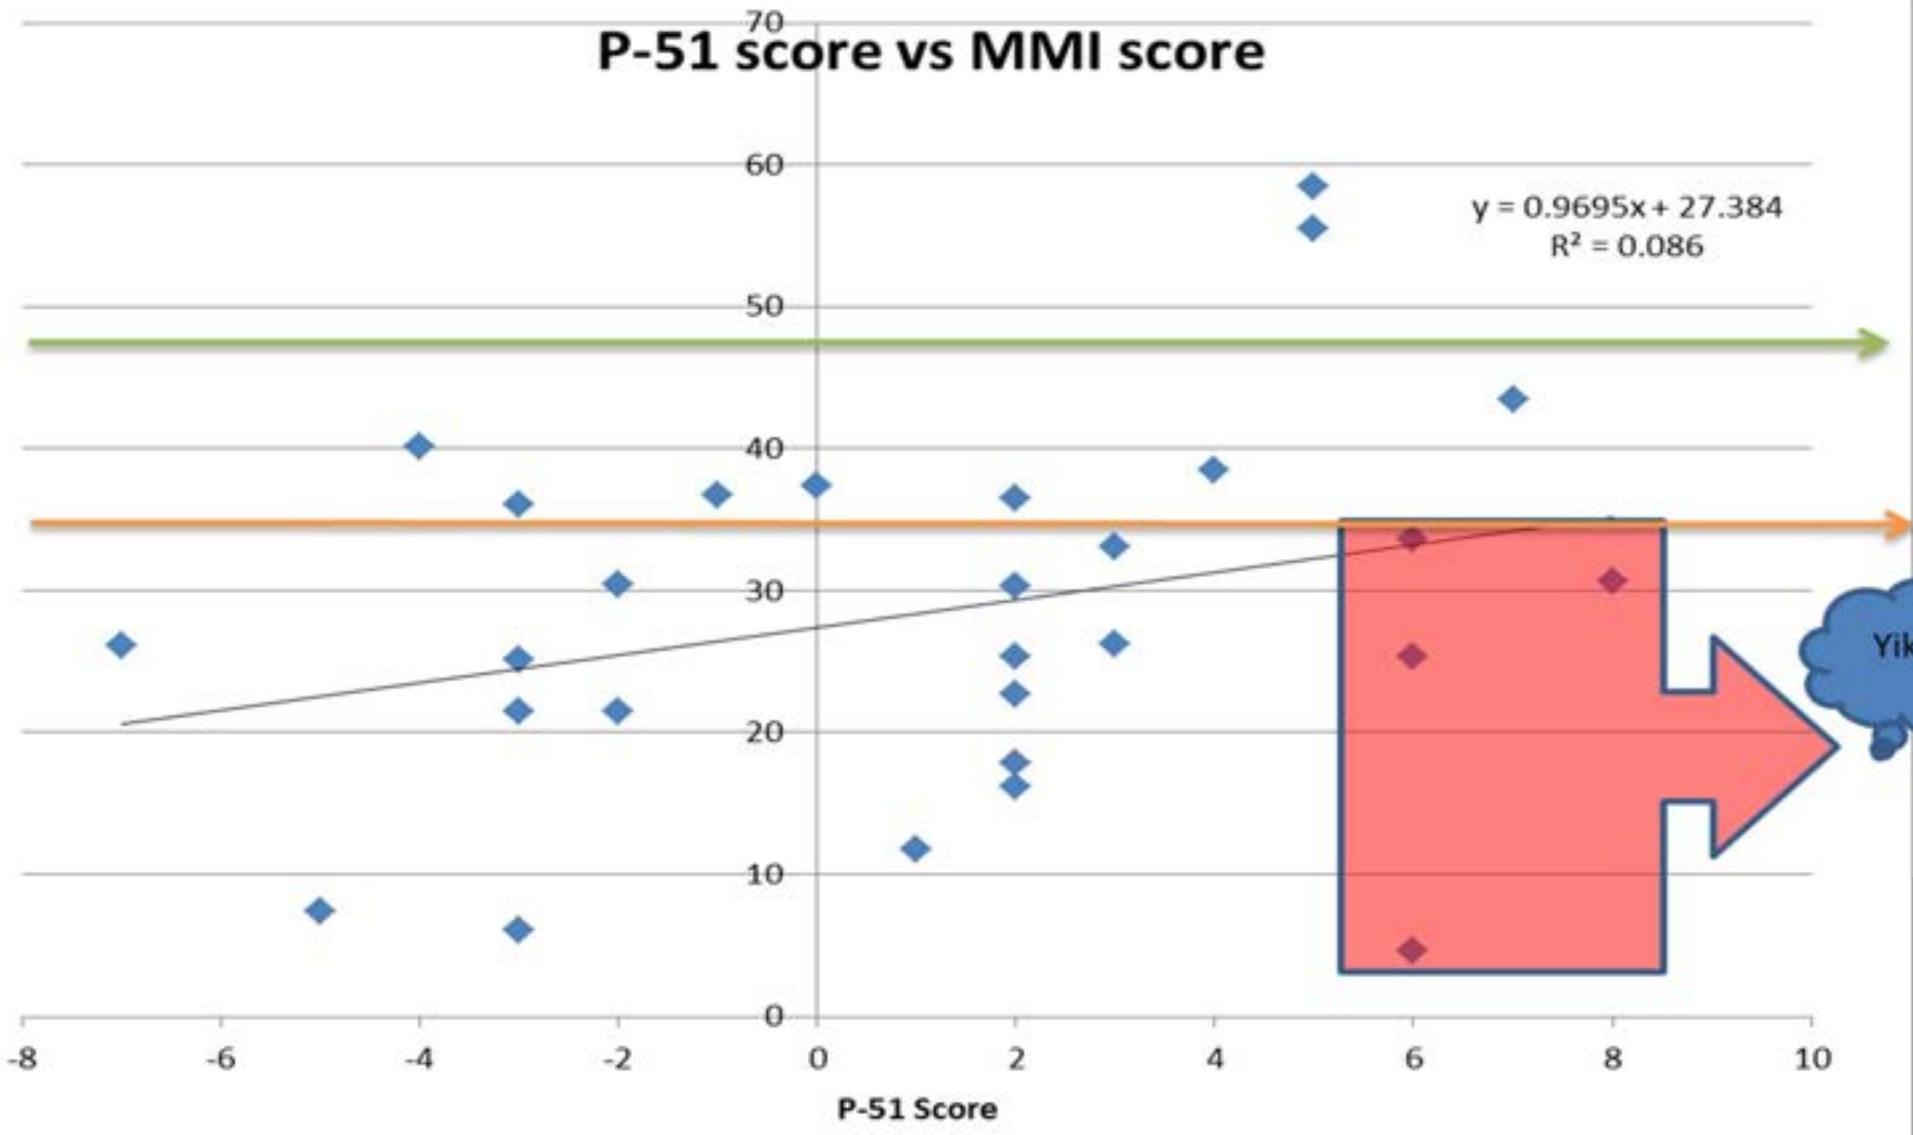

**LWQA**

**2012 MiCorps**

# P-51 score vs MMI score

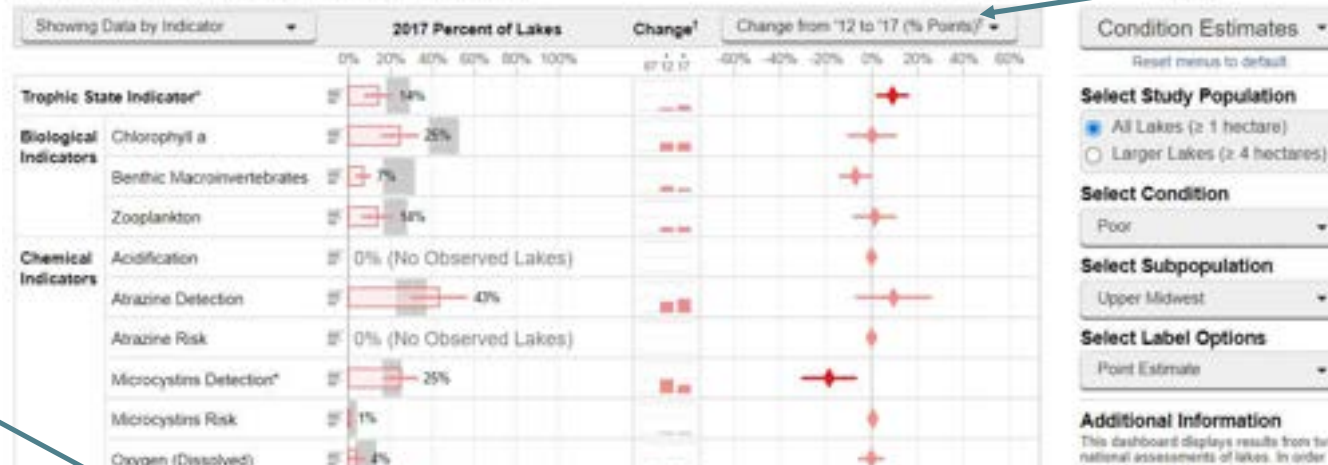

Yikes !!
